COWI has comprehensive experience in planning and design of electrical systems for all voltage levels and applications. We take pride in using the latest developed software tools enabling us to offer tailored results being in compliance with the newest international standards and design recommendations.

Consequently our specialists are constantly qualifying themselves to provide adequate design services fulfilling the customer's particular requirement.

Our specialists have significant knowledge in using the worldwide recognized engineering tools such as NEPLAN and CYME today being adopted by major electric utilities and contractors.

COWI offers complete studies covering all phases ranging from master

planning and fact finding missions to detailed design for the optimisation of network upgrading, grid analysis for integration of distributed generation etc. We find it natural that the cus-

tomers participate in the process and encourage his close co-operation. COWI also offers training seminars in the use of the engineering tools at the customer or at our head office.
